

## Classroom Interactivity & Management Software Package

**Low-cost, easy to use, efficient classroom interactivity and management software package.**

ACADEMUS CRS classroom interactivity and management software package provides a simple, efficient and easy to use didactic tool to the education professionals.

Academus CRS enables a teacher:

1. to build his or her database of classes.
2. to create interactive quizzes and assessment tests.
3. to monitor the interactive procedure of student responses per session through his or her computer.
4. to analyze and evaluate students' results according to various parameters, create all kinds of reports based on the parameters of his choice and export any data to MS Excel.

Students can connect to the Academus CRS platform through the free-of-charge Academus Virtual Clicker CR-50.

**Academus CRS software application consists of:**

1. **CRS-QB - Academus Question Builder**
2. **CRS-RM - Academus Response Management**
3. **CRS-CM - Academus Class Management**
4. **CR-50 - Academus Virtual Clicker**

## ACADEMUS CRS-QB Question Builder

- Allows the creation of teacher/student interactive classroom quizzes.
- Can be easily installed in any computer running MS Office.
- Upon installation, it appears as an add-on toolbar on the main screen of Power Point or Word, with a sequence of buttons which offer to the teacher the capability to create an interactive quiz, set its parameters, etc.
- Is also offered free of charge as a CRS-iQB stand-alone application which can be downloaded at [www.academus.us](http://www.academus.us).

## ACADEMUS CRS-RM Response Management

- Real time management and monitoring of up to 50 simultaneous responses per classroom in the standard configuration and up to 250 responses per audience in a special custom configuration (CRS-250\*).
- Offers a real-time monitoring display for attendance, users connected, quiz completion and student or class performance.
- No internet connection required for the operation. All communications are implemented via local Wi-Fi or Ethernet LAN connection provided in school.
- Allows dual screen operation, where the class sees only the Quiz page and the teacher can also see and use the administration page.
- The system monitors online status of every user and alerts the teacher on non-allowed performance, such as surfing the internet or using the phone or pad for other applications, away from Academus platform!!!

\* Not included into ACADEMUS CRS standard package.

ID	CLASS	TOPIC	1. FIRST NAME	LAST NAME	USERNAME	X	Y	Z	STATUS	DATE OF BIRTH
1	Class	11	John	Doe	john	1	1	1	1	10/10/11 08:00:00 AM
2	Class	11	John	Doe	john	1	1	1	1	10/10/11 08:00:00 AM
3	Class	11	John	Doe	john	1	1	1	1	10/10/11 08:00:00 AM

## ACADEMUS CRS-CM Class Management

- Contains a sub-database of students and classes for registering and administering students per class.
- Contains topic and session sub-database of quizzes for storing and editing quizzes or presentations per subject, answers, time restrictions, correlations as well as class completion or performance parameters.
- Includes flexible tools which give many timesaving automatic features and advantages for analyzing student, group or classroom attendance and performance per subject, topic or specific teaching session during any chosen period of time.
- Stores every single result of each student in a class with a time and date of response stamp.
- The results of the completed tests can be analyzed and graded by the teacher.
- Offers various types of reports which can be produced and exported in commonly used Excel format for any further usage.

Academus CRS teacher's application is available for download at:

<http://www.academus.us/#!class-management/cmp>

## ACADEMUS CR-50 Virtual Clicker

- Intuitively understandable and easy to use even for the youngest students.
- Consists of big clear buttons of different types that get activated according to the type of the question.
- Doesn't require internet, communicates via LAN Wi-Fi connection.
- No set-up needed, plug-and-play type, automatic search and connection to the server.
- Sends all necessary information to the server regarding the performance of the student including presence, answer, time of completion, etc.
- No need for costly remote clickers and voting devices.
