POLYTECH activity

Sponsor and speaker

Polytech, specialized in education at Primary, Secondary and Tertiary level, intends to support the PEKAP's (*Pan-Hellenic Union of Informatics Teachers*) effort to inform the professors of Informatics, regarding the integration, of modern structures in the field of Education.

Polytech's 30 years of experience in the educational field combined with the long experience in the international field, enables the company's personnel to be aware of the teachers' /students' needs in the Information Technology sector and its rapid developments.

During the conference, Polytech presented to the Greek audience the mobile cart **PCB 301**, which enables the learning of science in secondary education through state of the art technologies. The PCB 301 is a comprehensive interactive learning system that allows the direct participation of the students in the teaching of Physics - Chemistry - Biology by conducting a wide range of experiments accompanied by a comprehensive software. The utility and functionality of PCB 301 was assessed and evaluated by all the teachers who attended the conference and stated: *“This laboratory should be an integral part of the teaching of science in every school across the country!”*.
